‘4th Tues.’ Conservation Lecture

Tuesday, Feb. 25th – 7:30 pm
Learning Center, SJWS

National Audubon’s
“Survival by Degrees: 389 Birds on the Brink”

presented by the
Sea and Sage Conservation Committee

Five years ago the National Audubon Society (NAS) released its first report of the potential impact on birds of climate changes. In October 2019, NAS released an update that factors in other threats in order to model the potential future ranges of North American birds. Their study compares the potential ranges and impact on populations at different degrees of temperature rise and demonstrates how important it is that we take action to affect the degree of warming that takes place.

Join Sea and Sage at our ‘4th Tuesday’ program as we explore the new report and online tool on the Audubon website and look at the impact on some of our local birds.

An important aspect in the various scenarios is what we do. We’ll talk a little about what Sea and Sage is doing now and what more we can do to fight climate change. We’ll review NAS’s ‘Call to Action’ and recommendations.

We’ll include time for Q&A because we also want to hear from you.

Doors open at 7:00 pm for snacks and social. Program starts at 7:30.

Please join us for this important program!

Directions to the San Joaquin Wildlife Sanctuary are on our website:
